Comments on FCC 12-338

Within ET Docket 12-338 the FCC proposes to change the secondary allocation status in the 1900-2000 kHz band segment to primary status for the amateur service. I fully support this change to primary status for the amateur service.

The availability of todays GPS satellite systems and other modern technology have resulted in radiolocation beacons disappearing from the 1700-1800 kHz and 1900-2000 kHz shared band segments altogether.

Amateur radio operators, including myself will use the 1900-2000 kHz spectrum consistently and demonstrate its highest level of usage.

Thank You

Brian Holloway, W5HRO
